

IQ Series IQ-AR Adapter Rings

Always the Right Adapter on Hand

It's a story as old as media technology itself: Only an HDMI cable has been installed at the lectern, but the speakers want to use their own devices for the presentation. Laptops and tablets with (mini) DisplayPort, USB-C or DVI either don't work or they must be adapted. So you provide a bunch of adapters, but after two days they have gone missing without a trace. This costs time,

money and nerves, but does not need to be the case. Our IQ series adapter rings solve this problem simply and easily. The adapter ring is attached to the cable so each presenter can choose his or her appropriate adapter, but not take it with them easily. This way, all adapters always stay in place and can be reused at any time.

HDMI for Your Meeting Room

The IQ HDMI adapter rings are available in four variations: IQ-AR100/110 for 2K HDMI as well as IQ-AR200/210 for 4K HDMI, each including three or six adapters.

All Common Signals

The adapter rings come in a variety of configurations. With HDMI, DVI, USB-C, (Mini) DisplayPort, Mini and Micro HDMI as well as VGA, every common signal type is covered.

Anti-Theft for Individual Adapters ...

The self-developed cable lock and fastening system prevents the steel wire rope from being opened and thus prevents the unauthorized removal of individual adapters.

USB-C for Your Laptop Bag

The IQ-AR300 4K USB-C adapter ring is equipped with four USB-C male connector adapters. This makes the latest laptops and mobile devices compatible with older conference technology.

Perfect Transmission

All adapters are equipped with gold-plated precision plug contacts, ensuring safe, unaltered, and long-term dependable signal transmission.

... and the Whole Ring

Using the included cable tie, the whole ring is fixed to a signal cable of any diameter for preventing theft or accidental loss, making it infinitely reusable - Simply swap the cable tie.
