

4K@60/ HDCP 2.2 AV over IP Encoder/Decoder for HDMI NJR-T01UHD/NJR-R01UHD

The NJR-01UHD is an AV over IP solution for high definition signal transmission via fiber optic cables or category cables. This 4K solution leverages 10 Gb Ethernet switches and enables signal management of 4K@ 60 (4:4:4) signals with zero latency. RS-232C bidirectional communication and LAN transmission are also supported.

The NJR-01UHD can be used with other IP-NINJAR products. Combined with the NJR-R04HD, 4K@60 signals that is sent from the NJR-T01UHD can be divided into four full HD signals and be displayed on sink devices. When using the NJR-T04HD and the NJR-R01UHD together, four ports' full HD signals that is sent from the NJR-T04HD can be displayed as 4K@60 signals on a sink device.

Please use this product with a combination of NJR-T01UHD and NJR-R01UHD or IP-NINJAR series encoders and decoders. It cannot be connected to OPF or FDX series.

*1 x.v.Color, 3D, ARC, HEC, and CEC are not supported.

*2 HDR is supported if the connected sink device supports HDR and its copied EDID is set for EDID setting.

*3 Use 16.4 ft. (5 m) or shorter HDMI cables.

*4 Supported 4K formats : 24 Hz/25 Hz/30 Hz/50 Hz (4:4:4)/59.94 Hz (4:4:4)/60 Hz (4:4:4)

*5 Supported 4K format : only 24 bit

*6 It is possible to connect without using the recommended polishing method, but that may cause a change of transmission distance ability due to an increase in return loss.

*7 The maximum transmission distance is measured under the following conditions: Fiber that is polished by a recommended method is used, there is no interconnection, and the allowable bending radius is not exceeded.

*8 The actual maximum transmission distance may be shorter than the stated distance depending on the following conditions: quality and cabling of the Cat 6A cable, combination with 10 GbE switch, and installation status of the 10 GbE switch.

Video may be interrupted or may not be output even if signals are within the range of the maximum transmission distance.

*9 For digital systems, some problems, such as an HDCP authentication error, can often be recovered by physically disconnecting and reconnecting the digital cables. However, the Connection Reset feature will fix these problems automatically without the need to physically plug and unplug the cables. It creates the same condition as if the cable were physically disconnected and reconnected. This feature only works for the NJR's output. If other devices are connected between the NJR's output and sink device, this feature may be invalid.
